
EnviroCon Systems' Green Policy

At EnviroCon Systems, we are committed to making a positive impact on the environment by developing and implementing effective green practices and procedures as a rule, not an exception.

To achieve this, we are taking the following actions:

- **Reducing our Carbon Footprint Strategy**

EnviroCon Systems, Inc., strives to sustain a green fleet using telematics (SamSara). This system tracks our entire fleet from trucks and trailers to fusion machines, monitoring each vehicle and providing real-time data to drivers and managers. Tracking consists of engine idling, driver performance, efficient route management and consolidation, and traffic avoidance. We also monitor and maintain our fleet from oil and fluid changes to tire inflation and rotation resulting in better fuel efficiency and lower repair costs.

- **Recycle and Reuse**

Besides providing recycling within the EnviroCon Systems offices, we recycle HDPE scrap, metal scrap, aluminum, batteries, waste oil/fluid, mineral spirits, and filters.

We utilize trade specialists to refurbish worn or damaged parts to extend the life of the parts. We recover heater bags, recoat heater plates, resharpen blades, repair and mill aluminum accessories and metal structures.
